ANIMAL EVIDENCE ACTIVITY

KNOWSLEY SAFARI

Sometimes we can't spot the animals that we want to survey, for many different reasons. Maybe they are small and easily missed. Maybe they are shy and hide away from humans. Or maybe they only come out at night.

However, we can often find evidence of their presence in the form of clues they leave behind. It could be a hoofprint left in some mud letting us know a deer has been near, a chewed leaf full of holes following a caterpillar's lunch, some feathers on the ground or an empty spider web.

Have a look around and see if you can find any animal evidence. Use the boxes below to draw a picture of what you found and have a guess at what type of animal you think it might be.
